

HOANG HUU DUC

MIDDLE MOBILE ENGINEER (FLUTTER)

hoanghuuduc22@gmail.com • (+84) 9427 68 316 • <https://www.linkedin.com/in/nhdute/>

SUMMARY

Mobile Engineer with 4 years of building scalable Flutter apps (iOS/Android/Windows) and native iOS in Swift, with App Store publishing experience. Skilled in Clean Architecture, reusable UI component systems, performance optimization, and high scalability. Backend development experience in Golang with 1 year of experience. Experienced in following clean coding standards, reviewing code, and mentoring junior developers.

CORE SKILLS

- **Languages:** Dart, Swift
- **Frameworks & Libraries:** Flutter, SwiftUI
- **State & Data:** Riverpod, Bloc, GetX, WebSocket; design patterns
- **UI & Responsive:** Material UI with responsive, adaptive UI; Pencil, Figma handoff
- **Architecture:** Clean architecture, reusable component systems, performance optimization
- **Integration:** REST API, Firebase SDK; POS SDK
- **Code Quality:** Code review, coding standards, maintainability, reusability, unit testing, release checklist
- **Release:** Github actions, Fastlane with experience publishing apps in the App Store
- **AI Coding:** Claude Code, Cursor with Agents Skills, Agent Rules.

PROFESSIONAL EXPERIENCES

EN NAM SOFTWARE JSC

Chanh Hung, Ho Chi Minh City

Mobile Developer

March 2025 - Present

- Architected, developed, and scaled cross-platform POS (Point of Sale) merchant applications across Windows, Android, and iOS, targeting US market ecosystems such as Salon Bookly and TWS Solutions.
- Engineered custom native plugins using Swift (iOS) and Kotlin (Android) to seamlessly integrate hardware POS terminals for secure card, contactless, and cash payment processing.
- Leveraged advanced AI-assisted development tools (Claude Code, Cursor) and Clean Architecture principles to accelerate feature delivery, enforce modular design, and maintain high code quality across multi-platform codebases.
- Managed rigorous bug triage, performance profiling, and root-cause analysis to ensure high stability, flawless hardware communication, and smooth transaction processing in production environments.

*Achievements:

- Successfully delivered and deployed production-ready POS merchant applications for the US market (Salon Bookly & TWS Solutions), streamlining merchant checkout workflows, booking, and payment operations.
- Established robust reusable UI component patterns and scalable state management using Flutter and GetX, significantly boosting development velocity and long-term maintainability across desktop and mobile form factors.
- POS app released for US markets: <https://salonbookly.com/> | <https://twssolutions.us/vi/>

HRDEPT VIET NAM (Part-time)

Ho Chi Minh City

Back-end and Mobile Developers

May 2025 - Present

- Led a cross-functional team of developers delivering a high-traffic HR recruitment platform comprising multiple web interfaces and a high-scale mobile application (currently serving over 2,000 active candidates and 400+ employers).
- Engineered a production-ready mobile application using Flutter with Clean Architecture, Riverpod, providing robust profile management, CV building, and seamless one-tap job application workflows.
- Defined technical architecture, coding standards, and reusable component patterns while driving code reviews, mentoring team members, and collaborating closely with QA and DevOps.
- Tech: Flutter, Golang, Python, Postgres, Microservices, ZaloPay, VietQR

*Achievements:

- Successfully scaled the platform to support 2,000+ active users and 400+ corporate recruiters

- Established a unified, scalable system architecture and reusable UI component library, significantly boosting development velocity and release quality across web and mobile ecosystems.

T&E INTELLIGENT ASIA

Tan Binh, Ho Chi Minh City

Mobile Developer

Oct 2023 - November 2024

- Delivered production-ready mobile UI from design to implementation using Flutter and Swift for a medical facility communication and task management platform within a 4-member agile team.
- Designed and developed core modules and real-time chat messaging features, ensuring seamless daily workflows and task coordination for medical staff for Japan market.
- Optimized app performance, resolved critical bugs, and streamlined deployment workflows using Fastlane CI/CD and Sourcetree.

*Achievements:

- Built a scalable and maintainable front-end architecture leveraging Riverpod, Hooks, and AutoRoute for robust state management and navigation.
- Delivered high-quality builds to the QC team on schedule, significantly improving application responsiveness, stability, and user experience across mobile devices.

GREEN SMART JSC

Thu Duc, Ho Chi Minh City

Mobile Developer

Jan 2022 - Aug 2023

- Developed, upgraded, and maintained multiple high-impact mobile applications (HRM, E-Signature, Logistics, and QA/QC) using Flutter, Provider, and GetX within a professional B2B software environment.
- Collaborated directly with clients to gather requirements, analyze needs, and deliver tailored software packages and custom mobile features.
- Configured backend APIs and utilized SQL Server for efficient data querying, database management, and seamless mobile-server integration.

*Achievements:

- Successfully delivered 4 major enterprise applications (HRM with camera/location timekeeping, E-Signature document management, Logistics container booking, and QA/QC construction tracking).
- Integrated advanced features include MQTT for real-time messaging/tracking, Firebase services, and multi-tenant workflows, significantly improving operational efficiency for enterprise clients.

PROJECT

POS Salonbookly Windows App

Mobile Developer

July 2025 - Present

- **Description:** Flutter-based Windows POS Manager for salon operations — appointments, tickets, checkout, customer check-in, staff workflows, and payments — running across Windows, Android, iOS, and Web. Owned core POS feature delivery end-to-end, from requirement clarification through implementation, testing, and release across major modules.
- **Language/Technologies:** Flutter, Dart, GetX, Dio, WebSocket, Firebase, PAX Payment Integration
- **Responsibilities:**
 - Developed and maintained major POS modules include appointment calendar, ticket management, checkout, customer check-in, and settings
 - Implemented complex business flows such as tip handling, split payment, loyalty/campaign usage, and PAX terminal payment integration
 - Collaborated with BA, UX/UI, QA, and backend teams to deliver reliable salon operations workflows
 - Applied modular GetX architecture (feature modules, shared UI system, multi-platform builds) to support scalability and maintainability
 - Owned end-to-end delivery of Windows POS features across nearly all core modules, from requirement analysis to implementation and release
- **Size & duration:** 4 members – ongoing
- **Platforms:** Windows, Android, iOS
- **Website:** <https://salonbookly.com/en/>

POS TWS Solutions App

Mobile Developer

May 2025 - Present

- **Description:** Flutter-based Mobile POS and business management app (TWS Manager) for multi-role commerce operations — retail/wholesale/online orders, inventory, CRM, payments, reporting, and admin workflows — running primarily on Android and iOS landscape tablets, with Web support. Owned end-to-end delivery of core POS features from requirement clarification through implementation, testing, and release across major modules.
- **Language/Technologies:** Flutter, Dart, GetX, Dio, Socket.IO (WebSocket), Firebase (Analytics, Messaging, Crashlytics), Freezed, Envied; Payment integrations: Nuvei, GOAT, PAX, etc gateways
- **Responsibilities:**
 - Developed and maintained major POS modules include retail order creation/checkout, order management (retail/wholesale/online), inventory & products, CRM/clients, payments & terminal configuration, and business settings
 - Implemented complex commerce flows such as multi-discount/loyalty/voucher checkout, multi-gateway card payments, PAX/Dejavoo terminal payments, refunds, and receipt/invoice printing
 - Collaborated with BA, UX/UI, QA, and backend teams to deliver reliable multi-tenant retail and wholesale operations workflows
 - Applied modular GetX architecture (feature modules, shared UI/common components, flavor-based multi-environment builds) to support scalability and maintainability across tablet platforms
 - Owned end-to-end delivery of core Mobile POS features across nearly all major modules, from requirement analysis to implementation and release
- **Size & duration:** 3 members – ongoing
- **Platforms:** Android, iOS
- **Website:** <https://twssolutions.us/vi/>

HRDEPT PLATFORM: 1 Backend and 1 Mobile App

Back-end and Mobile Developers

May 2025 - Present

- **Description:** A recruitment platform connecting employers and job seekers through job posting, application tracking, candidate communication, interview scheduling, onboarding, and admin management features, supporting a growing user base.
- **Language/ Technologies:** Flutter, Shadcn UI, Riverpod, Golang, Postgres, Jenkins, Docker
- **Roles:** Back-end & mobile development, CI/CD pipelines, code reviews, and feature delivery.
- **Responsibilities:**
 - Back-end and mobile development across 1 backend and 1 mobile app
 - Managed project planning, team coordination, code reviews, and feature delivery
 - Oversaw CI/CD pipelines and deployment workflows to ensure scalable and reliable systems
 - Collaborated with cross-functional teams to improve performance and user experience
 - Supported project operations, resource planning, and team effectiveness.
- **Size & durations:** 4 members + 1 year
- **Website:** <https://hrdept.vn>

i-SuperApp@LTA

Mobile Developer

Feb 2023 - Aug 2023

- **Descriptions:** Evolved an initial driver-focused logistics solution (Empty Container IN/OUT registration) into a comprehensive enterprise Super App (featuring medical services, truck/driver management, and container booking/reward systems). The app digitizes depot procedures, eliminating paper forms for drivers while streamlining partner operations.
- **Language/ Technologies:** Flutter, GetX, BLoC, Provider, Riverpod, Hooks, Microsoft SQL Server, Firebase, GitHub
- **Responsibilities:**
 - Spearheaded full mobile application lifecycle development as the sole developer, successfully transforming the core container management tool into a multi-service Super App platform.
 - Designed and built new features, core modules, and optimized UI/UX, scaling the architecture to support complex operational workflows.

- Managed end-to-end testing, bug fixing, performance optimization, and successfully deployed stable builds to both the Apple App Store and Google Play Store.
- Collaborated directly with clients and stakeholders to gather requirements, analyze needs, and deliver tailored solutions.
- **Size & durations:** 2 members in 6 months
- **Websites:** <https://ltacv.com/>

SmartHRMS

Mobile Developer

June 2022 - Dec 2022

- **Descriptions:** An enterprise Human Resource Management mobile application developed for Green Smart Solutions Joint Stock Company, enabling digital timekeeping via camera and location tracking, leave/business trip registrations, day-off tracking, and salary monitoring.
- **Language/ Technologies:** Flutter, Provider, Microsoft SQL Server, Firebase, GitHub
- **Responsibilities:**
 - Developed core modules, social media features, and upgraded timekeeping and leave/business trip management systems.
 - Handled end-to-end testing, bug fixing, performance optimization, and document writing as a multi-role developer.
 - Successfully deployed and managed production releases for both iOS and Android platforms on the App Store and Google Play Store.
- **Size & duration:** 2 members over 6 months
- **Website:** <https://gsotgroup.vn/smart-hrms>

EDUCATION

HCMC University of Technology and Education

Bachelor of Information Technology

Ho Chi Minh City, Vietnam

August 2019 - August 2023
